

Travel and Vaccine Information

Due to excessive demands for normal health appointments with our Nursing Team, we can no longer provide travel advice. You can obtain this from a private travel clinic (www.masta-travel-health.com).

If you are planning a trip abroad and think you require any vaccinations relating to foreign travel, please use the website Travel Health Pro (www.travelhealthpro.org.uk) to determine what vaccinations you are required / advised to have and Fit for Travel (www.fitfortravel.nhs.uk) for up-to-date travel advice for your destination. This will include which countries and areas within countries you are visiting.

If you need your vaccination records, patients registered at Chevin Medical Practice can access these through online patient access or call into the Practice to request a printed copy.

The only free travel vaccinations included by the NHS (i.e. the only vaccines we administer) are below (dependent on both appointment and vaccine availability – please allow at least 6 weeks before your intended trip):

- Polio, Diphtheria and Tetanus booster (3 in 1 vaccine) – 10 years protection
- Hepatitis A – 25 years protection after 2 doses
- Typhoid fever – 3 years protection
- Cholera (only if considered high risk)

These vaccines are free because they protect against diseases thought to represent the greatest risk to public health if they were brought into the country.

If you have any further queries, please speak to a member of the Reception Team.
